USSR/Medicine - History

Card 1/1 : Pub 102-12/14

Author : Kvitnitskiy-Ryzhov, Yu. N., Candidate of Medical Sciences (Kiev)

Title : From the history of training of Russian medical personnel (In connection with 95 years of medicine as a graduate study and of medical practice in Russia)

Periodical : Sov. zdrav., 6, 51-57, Nov-Dec 1954

Abstract : Foundation for a self-sufficient Russian medical science was laid in the 18th century and began to take shape under M. V. Lomonosov's guidance. His followers picked up where he left off. The first institute of physicians was founded in 1858 with membership in it made up of instructors of the Medico-Surgical Academy at Petersburg. Ivan Timofeyevich Glebov is credited with founding this institute. In June 1858, therefore, the medical profession will celebrate the 100th anniversary of existence in Russia of medical training as post-graduate study and clinical practice as a profession. The Russian medical men will be honored at that time for their great service to their country and humanity and for intensity of their patriotism.

Title : P.I. Peremezhko: 75 Years Since the Description of the
Indirect Division of Animal Cells.

Orig Pub : Uspekhi sovrem. biologii, 1955, 40, No 3, 264-371

Abst : Biographic data are provided on Petr Ivanovich Peremezhko (1833-1893), Professor at Kiev (1868-1891). Peremezhko's dissertation dealt with histogenesis in muscles. It was in Peremezhko's laboratory that P.I. Sokolov's researches (1881) showed the possibility of regenerating muscular tissue. Peremezhko later investigated the histological structure of the thyroid gland and of the pituitary, as well as the structure and development of the pancreas. Of the embryological researches of Peremezhko, mention is made of his investigation of embryonic

Card 1/2

lamellae in chicks. In 1887, Peremezhko, independently of Flemming, made a detailed description of the division of animal cells through mitosis, establishing the sequence of events in this process. The pathologist V.V. Podvysotskiy and the neurohistologist A.V. Leontovich were disciples of Peremezhko. The article includes a list of Peremezhko's publications (31 titles) and a list of projects completed in his laboratory (9 entries).

EXCERPTA MEDICA Sec.5 Vol.11/4 General Pathology Apr 58

1147. THE PROBLEM OF PATHOLOGICAL DISPLACEMENT AND MIXING OF
'ANLAGE' MATERIAL IN THE EARLY STAGES OF HUMAN EMBRYONIC
DEVELOPMENT (Russian text) - Kvitnitskiy-Ryzhov Y. N. Dept. of
Histol. and Embryol., Med. Stomatol. Inst., Kiev, USSR - ARKH. ANAT.
GISTOL.EMBRIOL. 1956, 33/3 (62-64)

A 6-8 weeks old human embryo is described which was obtained as a result of a spontaneous abortion. Partial degeneration of the embryonic membranes was noted. The caudal part of the embryo was underdeveloped, and the body contours were rounded up. Inside the brain 'anlage' there were particles of chondroid tissue present, 20-350 μ . in size. The described findings represent a rare instance of tissue displacement in the course of early pathologic ontogenesis. It is possible

1147

that the chondroid particles lying isolated in the nervous 'anlage' are the result of an early migration of chondrogenic material into the nerve tube. Two types of tissue displacement processes are possible: the first consists of a massive localized growth of chondroid into nervous tissue, i.e. 'expansive growth'; the second is a growth of chondroid tissue throughout the nervous tissue, producing the 'infiltrating growth'.

Title : Methods of Shortening the Period for Forest Maturation, and Increasing Woodstand Production.

Orig Pub: Nauch. tr. Lvovsk. lesotekhn. in-ta, 1954, 1, 151-171

Abstract: The need is discussed for decreasing the time for forest maturation and increasing woodstand production, which is especially important to forest-deficient districts of the south, east and west. The method of preserving small trees and undergrowth at felling time is effective. The speedy accumulation of reserve woodstands is explained by the fact that the growth at felling time proceeds in the presence of an initial reserve having been formed under the forest canopy together with the formation of ripened woodstands. Thus, 304 thin and young fir trees which

Card : 1/3

-6-

USSR/Forestry. Forestry and Forest Cultivation.

J-3

Abs Jour: Referat Zh-Biol., No 6, 1957, 22561

remained from the canopy of the maternal woodstand yielded 206 m³ of large size lumber in 50 years, while 1704 fir, pine and birch trunks which appeared after the cutting of the old forest yielded only 147m³ of thin woodstock. At that, the thin trees grew thicker stems than the undergrowth. The planting or sowing of forests by comparison with their growth from the undergrowth or thin trees is not conducive to formation either of a productive or a rapidly-maturing woodstand. This is true of coniferous and foliate trees. The quantity and quality of self-sowing trees and undergrowth depends on the structure of the maternal woodstand. Where the woodstand was a two-tier one and not a one-tier one, the self-sown and the young trees grow better. The woodstand formation develops in such a manner that the thin trees and the undergrowth rapidly growing form the upper tier; the self-sown remains under its canopy. At 45-50 years a two-tier woodstand is formed which may be assigned for felling; under its canopy there will already

J-3

Abs Jour: Referat Zh-Biol., No 6, 1957, 22561

exist thin and young trees -- the basis of a future woodstand. The cultivation of highly productive pine and foliate woodstands is possible on gray forest soils, podzolic in different degrees, and also on low-yielding mulch-carbonaceous soils. The cultivation of fast-ripening woodstands of foliaceous types was accomplished more easily than that of coniferous. The basic factor securing the possibility of cultivating fast-ripening forests is the two-tier or three-tier structure. To form a fast-growing woodstand ~600 stems per hectare are necessary, of the age of 20-30 years, grown under forest cover. Fast-ripening woodstands may also be cultivated on cuttings, plowed by draw plates (?) after a mechanized trelevki. In such a case the thin trees, young trees and self-sowers are preserved between the draw plates, forming a base for the future fast-ripening woodstand.

Kvíz, Zdeněk. On the probability of the discovery of a variable star. Publ. Fac. Sci. Univ. Masaryk 1956, 193-212. (Russian summary)

The probability of discovery of a variable star by the comparison of pairs of photographic plates of the same area of the sky at different times depends in part on the form of the light curve and on the amplitude. The author presents probability calculations for several forms of light curves, including those typical for RR Lyrae-type variables, cepheids, and long-period variables. The probabilities so obtained disagree in some cases with probabilities obtained by empirical methods. On the other hand, the author remarks, different empirical methods sometimes give substantially different results.

AUTHOR: Kvíz, Zdeněk

TITLE: The blue clearing on Mars and its possible connection with the meteor-rainfall hypothesis

PERIODICAL: Referativnyj zhurnal, Astronomiya i Geodeziya, no. 8, 1962, 78, abstract 8A536 ("Byul. astron. in-tov Chekhoslovakii", 1961, v. 12, no. 4, 150 - 157, English; Russian summary)

TEXT: Meteor streams give rise to phenomena in the Earth's atmosphere which can be observed and measured, e.g. specific features in precipitation, emergence of cirrus clouds, formation of crystallization nuclei, etc. Analogous effects of meteoric streams can be manifested in atmospheres of other planets. The blue clearing has apparently the same origin. A conclusion on the probable relation of blue clearing to the Mars heliocentric longitude can be drawn from the known cases of it. In two different time intervals, blue clearings were observed for five values of heliocentric longitude, and recurrences of clearings were discovered at different revolutions of the planet, which indicates the possible effect of meteoric streams. There are 49 references.

TITLE: Comets and the periodicity of precipitation singularities

SOURCE: Meteorologicke zpravy, no. 6, 1965, 177-181

TOPIC TAGS: comet, climatology, atmospheric precipitation

ABSTRACT: Connection between precipitation singularities and the comets of Quadratides, Tuttle's Comet, and Grigg-Skjellerup's Comet are described. Precipitation singularities caused by these comets in Czechoslovakia, Japan, and Germany are discussed. The study of singularities should be correlated to the study of the movements of comets; although it is relatively easy to study the influence of known comets with a periodicity of a few years, the problem becomes extremely difficult when the trajectories approach the Earth only once every 100 years. Some singularities may also be due to comets that were not yet discovered, or to meteoritic dust. Suitable statistical methods for the study of these phenomena are discussed. Orig. art. has: 7 figures and 6 tables. [JPRS]

TITLE: The photographic photometry of the comet Burnham 1959 k

PERIODICAL: Referativnyy zhurnal, Astronomiya i Geodeziya, no. 12, 1962, 68,
abstract 12A501 ("Byul. astron. in-tov Chekhoslovakii", 1961, v.12,
no. 6, 251 - 254, English; Russian summary)

TEXT: During the time from May 2 to May 4, 1960, 6 photographs of the comet Burnham were taken with a 20.4-cm astrograph. A recording microdensitometer was used for plotting isophotes. Average velocities of particles in the cometary tail and approximate values of repulsive forces were determined from changes of isophotes. The order of magnitude of forces agrees with the value determined by S. V. Orlov for tails of the first type. There are 6 references. VB

TITLE: Thermodynamic functions of monoatomic and diatomic gases
in a wide temperature range. IV. N^+ , N_2^+ , and NO^+ in
ideal state up to $20,000^\circ K$

PERIODICAL: Referativnyy zhurnal. Khimiya, no. 11, 1961, 40, abstract
115 292 (Sb. tr. Gos. in-ta prikl. khimii, 1960, vyp. 46,
15 - 28)

TEXT: The thermodynamic functions (Φ_T^* , S_T^0 , and $H_T^0 - H_0^0$) of N^+ , N_2^+
and NO^+ in ideal state up to $20,000^\circ K$ at a pressure of 1 atm were
calculated on an electronic computer. In the values Φ_T^* and S_T^0 at
 $T \leq 10,000^\circ K$, the error does not exceed 0.01 cal/mole/deg, and at
 $T = 20,000^\circ K$ it does not exceed 0.2 cal/mole/deg. The values of the
logarithms of the equilibrium constants for the ionization of N , N_2 , NO
and the dissociation of N_2^+ and NO^+ are given. [Abstracter's note:

state are presented in table form for 335 gases, 44 liquids, and 45 solids compounded from 33 chemical elements and their isotopes, viz.: H, D, T, He, Li, Be, B, C, N, O, F, Ne, Na, Mg, Al, Si, P, S, Cl, Ar, K, Ca, Br, Kr, Re, Sr, Zr, I, Xe, Cs, Ba, Hg, and Pb. Thermodynamic properties are given for the following 22 gases in the range from room temperature to 20,000°K: H, H⁺, H⁻, O, O⁺, H₂, O₂, O₃, OH, OH⁺, H₂O, N, N⁺, N₂, N₃, NO, NO⁺, C, C⁺, CO, CO⁺, and e⁻; for the 14 least stable gases up to 4000°K; and for the remaining 299 gases up to 6000°K. Virial coefficients for 34 gases are also given up to 6000°K.

TITLE: Thermodynamic functions of monatomic and diatomic gases within a wide temperature interval. V. Alkali metals in the state of an ideal gas up to 10,000°K

PERIODICAL: Zhurnal fizicheskoy khimii, v. 36, no. 1, 1962, 219 - 222

TEXT: The thermodynamic functions of gaseous Li, Na, K, Rb, and Cs (Φ_T^* , S_T^0 , $H_T^0 - H_0^0$) were calculated for temperatures of up to 10,000°K by the method of L. V. Gurvich and V. A. Kvlividze (Zh. fiz. khimii, 35, 1672, 1961). When calculating the statistical sums and the figures derived from them, allowance was made for all the electron states of the individual gases, which are related to the transition of the valence electron into a state with the principal quantum number $n \leq n_{\max}$. $n_{\max} = 2.461 \cdot T^{1/6}$. $\log K_p$ was calculated from $\log K_p = 0.21854 [\Phi_T^*(M^+) + \Phi_T^*(\bar{e}) - \Phi_T^*(M) - \frac{I}{T}]$, where $\Phi_T^*(M)$, $\Phi_T^*(M^+)$, and $\Phi_T^*(\bar{e})$ are the values of Φ_T^* of the gaseous alkali metal,

state are presented in table form for 335 gases, 44 liquids, and 45 solids compounded from 33 chemical elements and their isotopes, viz.: H, D, T, He, Li, Be, B, C, N, O, F, Ne, Na, Mg, Al, Si, P, S, Cl, Ar, K, Ca, Br, Kr, Re, Sr, Zr, I, Xe, Cs, Ba, Hg, and Pb. Thermodynamic properties are given for the following 22 gases in the range from room temperature to 20,000°K: H, H⁺, H⁻, O, O⁺, H₂, O₂, O₃, OH, OH⁺, H₂O, N, N⁺, N₂, NO, NO⁺, C, C⁺, CO, CO⁺, and e⁻; for the 14 least stable gases up to 4000°K; and for the remaining 299 gases up to 6000°K. Virial coefficients for 34 gases are also given up to 6000°K.

TABLE OF CONTENTS (Volume 1) [Abridged]:

Foreword	11
Introduction	19

PART I. METHODS OF CALCULATING THE THERMODYNAMIC PROPERTIES OF INDIVIDUAL SUBSTANCES

Card 3/3

GURVICH, L.V.; KVLIVIDZE, V.A.; RTISHCHEVA, N.P.

Thermodynamic functions of monoatomic and diatomic gases over
a wide temperature range. Part 5. Zhur. fiz. khim. 36 no.1:
219-222 Ja '62. (MIRA 16:8)

1. Institut goryuchikh iskopayemykh AN SSSR.
(Alkali metals) (Thermodynamics)

GURVICH, L.V.; VOROB'YEV, B.A.; KVLIVIDZE, V.A.; PROZOROVSKIY, Ye.A.; TRISHCHEVA, N.P.; YUNGMAN, V.S.

Thermodynamic functions of mono- and diatomic gases within a wide range of temperatures. Part 6: O, O⁺, O₂, and O₂⁺ in the ideal state up to 20 000° K. Trudy GIFKH no.49:38-60 '62.

(MIRA 17:11)

L 8550-65 EWT(1)/EWT(1) ASD(a)-5/AFTG(b)/AFWL/AFMD(p)/AFETH/SSD/ESD(dp)/
ESD(t)/RAEM(t) JD/JW
ACCESSION NR: AR4044045 S/0058/63/000/011/E002/E002 B

SOURCE: Ref. zh. Fizika, Abs. 11E6

AUTHOR: Gurvich, L. V.; Vorob'yev, B. A.; Kvivilidze, V. A.; Prozorovskiy, Ye. A.;
Rtishchcheva, N. P.; Yungman, V. S.

TITLE: Thermodynamic functions of monatomic and diatomic gases in a broad
temperature range. VI. O, O+, and O₂ in the ideal state to 20,000 K

CITED SOURCE: (Sb. tr.) Gos. in-ta prikl. khimii, v. 49, 1962, 38-60

TOPIC TAGS: thermodynamic function, monatomic gas, diatomic gas, high speed
computer, computer

TRANSLATION: Gives the results of calculations of thermodynamic functions (G_T, S_T⁰
and H_T⁰—H₀⁰) O, O+, O₂, and O₂+, made, in accordance with previously-described methods
(Journal of Abstracts, Physics, 1D4; 2D10), on a high-speed computer. Bibliography:
67 references.

TITLE: Thermodynamic functions of monatomic and diatomic gases in a broad
range of temperatures. VII. C, C+, CO, CO+ in the ideal state to 20,000°K

CITED SOURCE: (Sb. tr.) Gos. in-ta prikl. khimii, vy*o. 49, 1962, 61-83

TOPIC TAGS: thermodynamic function, monatomic gas, diatomic gas, computer

TRANSLATION: Gives the results of calculations of the thermodynamic functions
(ρ , s , γ and μ) of C, C+, CO and CO+ made on an electronic computer in accordance
with previously described methods (Journal of Abstracts, Physics, 1962, 1D4;
2D10). Bibliography: 73 references. Part VI: see abstract 11E6.
